For Immediate Release

New Wohler*Plus* Audio Processors Deliver Flexible Functionality That Addresses Entire Audio Chain

Highly Configurable Modular System Provides Broad Range of DSP Options, Meeting Users' Unique Processing Needs Cost Effectively

Hayward, Calif. — April 8, 2008 — Wohler Technologies Inc., today announced the release of its new Wohler*Plus* line of modular audio processors, which represent state-of-the-art processing and monitoring tailored to the needs of digital broadcasting, whether for terrestrial broadcasting, video over IP, cable, or satellite. Intended to address the entire audio signal chain within digital broadcast operations, the highly configurable Wohler*Plus* units give users the specific processing capabilities they need rather than the “all-or-nothing” functionality of dedicated processing systems.

“Wohler*Plus* products offer a radical approach to audio processing and monitoring, providing a variety of DSP options that can be configured to deliver just the right functionality for a given facility or application,” said Carl J. Dempsey, Wohler president and CEO. “This flexibility extends the life of the product, which can be reconfigured by users as their operational needs evolve. For broadcasters working with Wohler*Plus* systems, a change in processing requirements no longer requires investment in an entirely new system.”

More...

By offering numerous DSP options, the innovative Wohler*Plus* line of audio products will help broadcasters to lower operational costs. The modular system features five processor slots with flexible I/O benefiting from 16 channels or eight AES pairs per card — five cards per system — and includes both monitoring and metering. Other options will include alarms, multiple-channel synchronization, and shuffling of channels for 5.1 or 7.1 signal confidence. Optional inputs will include multirate serial digital embedded audio with Dolby® decoding. The 2-RU Wohler*Plus* features a high-resolution TFT screen and on-board menu system for control, as well as Ethernet and RS-232.

Wohler*Plus* units can be operated through an integrated menu interface or, in the near future, via Ethernet and RS-232.
