

PERFECT MONITORING.
PERFECT BROADCASTS.

RACK MONITORS

MAVVIC / iSERIES / eSERIES

For over 40 Years

Professional Confidence Monitoring

AUDIO

Perfect measurement and real-time analysis with visual control on every device, with full-screen remote monitoring via network on any desktop or mobile device.

Loudness with ITU-R BS.1770 or EBU R128 standards, DOLBY, Phase. From all input formats.

VIDEO

Visual control on every device, with full-screen remote monitoring via network on every mobile device.

3G/12G SDI, MPEG SRT H.264, H.265

METADATA

Show captions, subtitles, PID tables, "zoom" into DOLBY metadata. On-site or anywhere in the world.

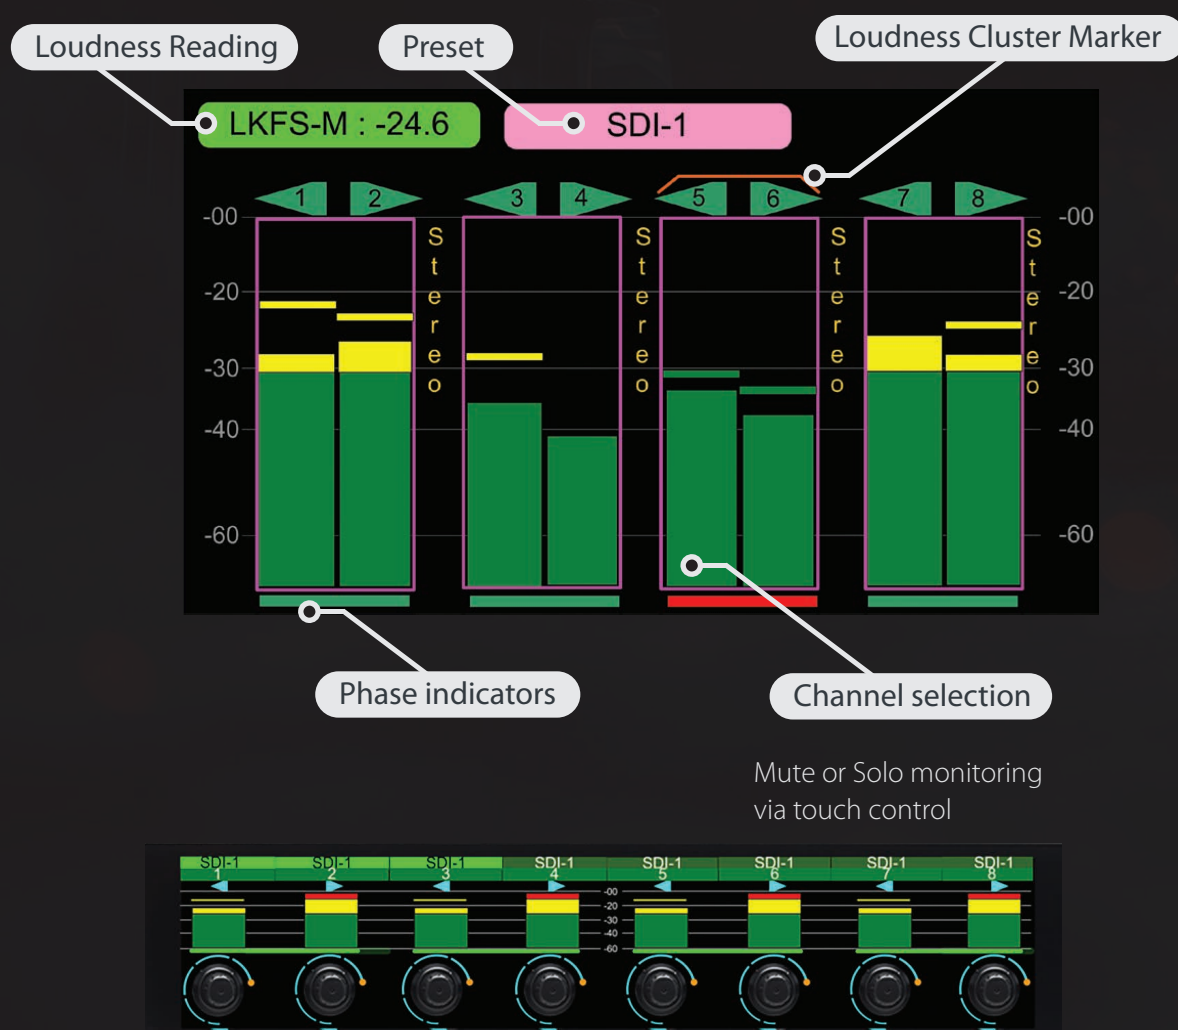

ACOUSTIC

Direct, high-quality monitoring with distortion-free Stereo Speakers - built into every device. Hear the audio, as it is experienced by the audience.

Up to 15 W RMS per side, 30 W Peak.

Quality monitoring tools for excellence and performance in the most critical moments.

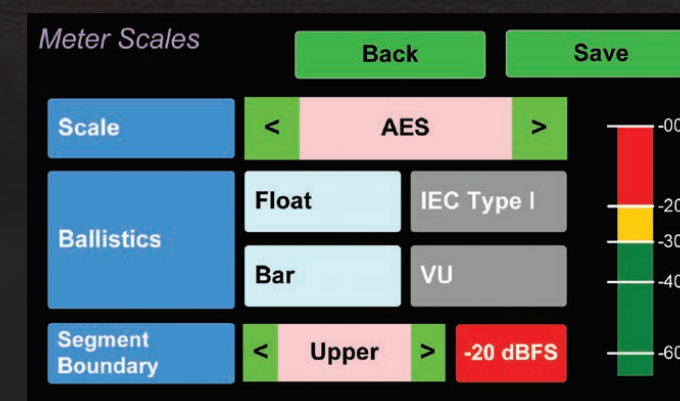

Visual control on every device:
Audio Level Meter Screens with touch control.

MAVRIC REMOTE
MONITORING

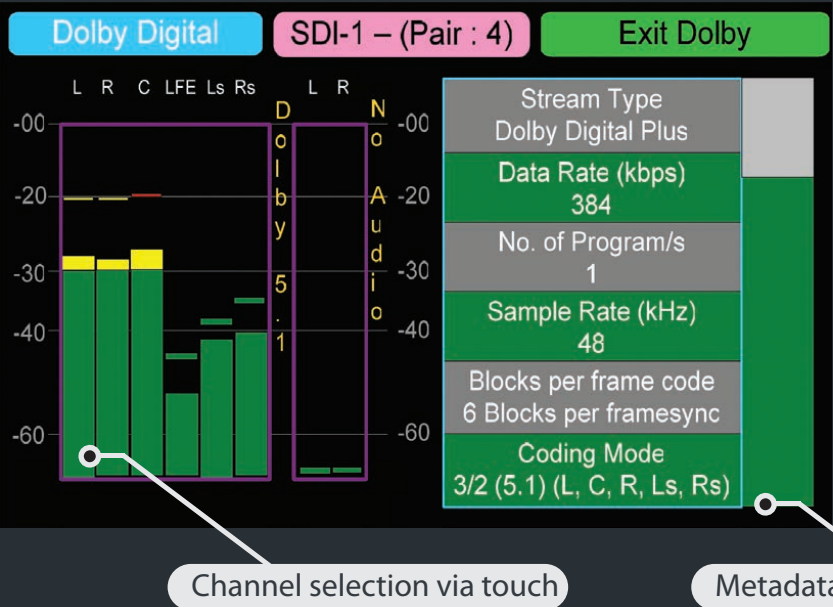

Audio meters are displayed on the display in up to 8 channel pairs. A choice of seven Peakmeter scales is available.

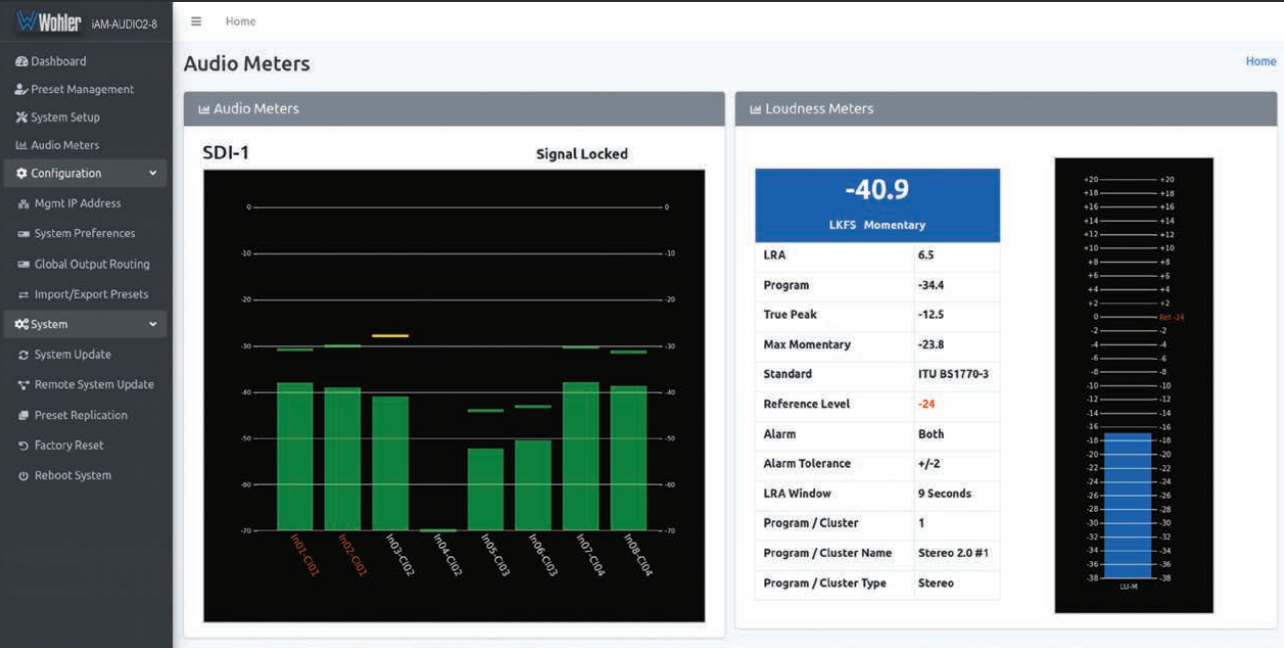

Ballistics and boundaries between the upper and middle segments (red and yellow) and the middle and lower segments (yellow and green).

“Zoom in to audio”
Analyse a single Dolby bitstream

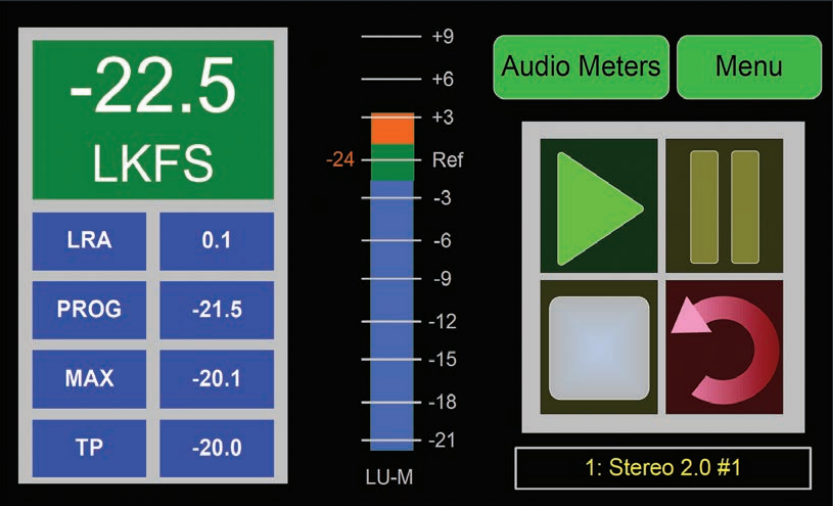

Immediately listen to and meter the contained audio channels.
View Dolby metadata, which can help you diagnose possible problems. It will vary according to the type of Dolby signal. Bitstreams are shown distinctively along with the normal metering channels.
Dolby decoding is an optional feature requiring the OPT-DOLBY license. It allows decoding and monitoring of Dolby® D, DD+, & E streams.

Control via Web GUI:
Fullscreen remote monitoring via network

The integrated remote control displays the status of the device and all audio meters and measurements of the source on a computer screen. The user interface also allows the routing of all channels with optional output routing license.

Loudness Meter

The Loudness Meter Screen provides a more detailed view of the Loudness Measurement. It is displayed along with the channel meter screen.
Loudness options include manual or continuous monitoring modes and different alarm modes:

Over

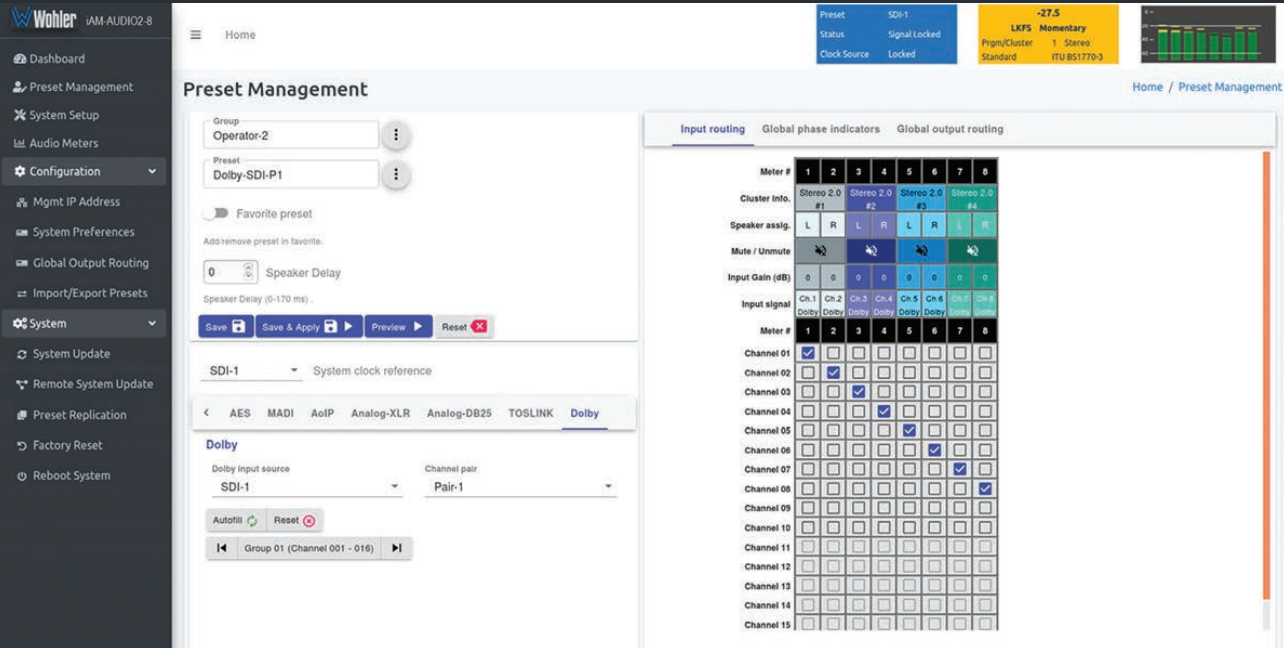

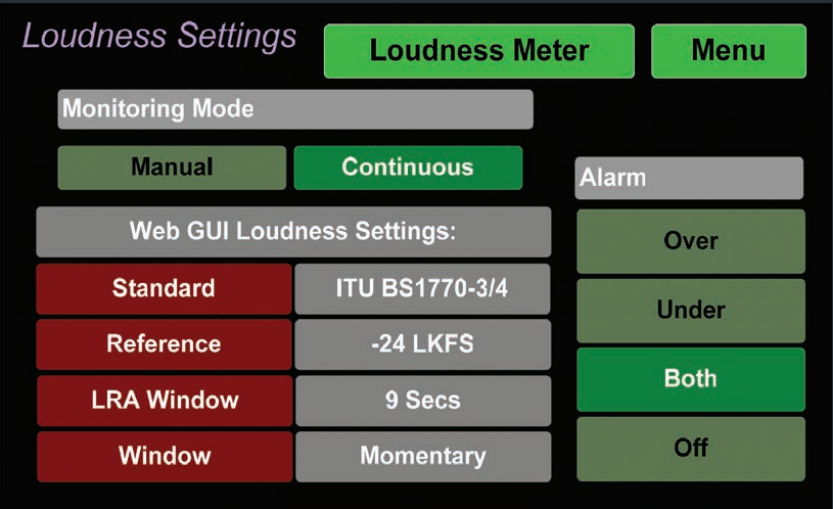

The alarm indication will only appear when Loudness has exceeded the reference level by the tolerance amount.

Under

The alarm indication will only appear when Loudness is below the reference level.

Both

The Alarm indication will only appear when Loudness has exceeded or is below the reference level by the tolerance amount.

The integrated Dolby Presets management allows simultaneous monitoring of Dolby decoded channels and other inputs.

MAVRIC

ADVANCED REMOTE MONITORING SYSTEM

BEST OF SHOW AWARD IBC 2024

HEAR THE AUDIO.

SEE THE VIDEO.

CONTROL THE DATA.

Do it in any global location.

Get loudness, and other data from one or more signal probes, directly from the event location - anywhere in the world, without an on-site presence. Automated alerts keep the operator's attention undisturbed, unless there is a pre-defined signal exception.

All information is directly accessible on a desktop browser or via the MAVRIC app. Available for Apple iOS & Android devices.

Remote

Monitor signals from anywhere, keeping your broadcast operations seamless and efficient.

Conferencing

Integrated communications across remote locations, between on-site and off-site personnel and operators.

Alerts

Receive real-time, automatic alerts across all signal types, ensuring you never miss critical updates.

Cloud-based

MAVRIC works locally or on the Wohler Cloud infrastructure. It provides secure encrypted communications across all interfaces and signal sources.

Remote **Monitoring**

Instant **Communication**

Automated **Alerts**

FEATURES

- Remotely listen to individual audio channels (8/16), or a stereo downmix of selected audio clusters.
- Remotely view audio meters and loudness levels for selected audio clusters and video signals.
- Remotely view signal metadata for all monitored signals.
- Support on-site and off-site personnel located across remote infrastructure like OB vans and remote data centers/TCR's.
- Enable rapid pinpointing and resolution of problems during live events.
- Seamlessly integrate monitoring systems across worldwide locations.
- Monitor signals remotely using a standard Internet browser or via an Android/iOS App.
- Construct your own multiviewer from probes deployed anywhere in the world.
- Create probe configuration presets to select video source along with any selection of 8/16 audio channels for remote monitoring.
- Use with built-in software audio probes available on all current Wohler iSeries in-rack monitors.
- Use with Signal probes available as hardware option card installed in your in-rack Wohler monitors, or on available Wohler openGear monitoring cards for remote monitoring.

EXAMPLE

Remotely Monitoring OB Van signals during live sporting events:

- Enables broadcast center operators to view signals in the OB Van remotely.
- Enables OB Van manager to remotely view signals terminating at the broadcast center to confirm switchovers.
- Avoid need to switch monitoring tools based upon signal type.
- Enables operators to have a signal-type agnostic unified interface to view video and audio meters and loudness, and listen to monitored signals across baseband and IP fabrics, without having to do a context switch.

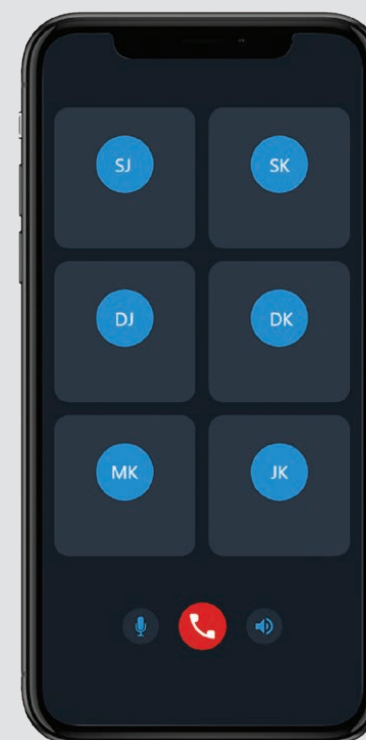

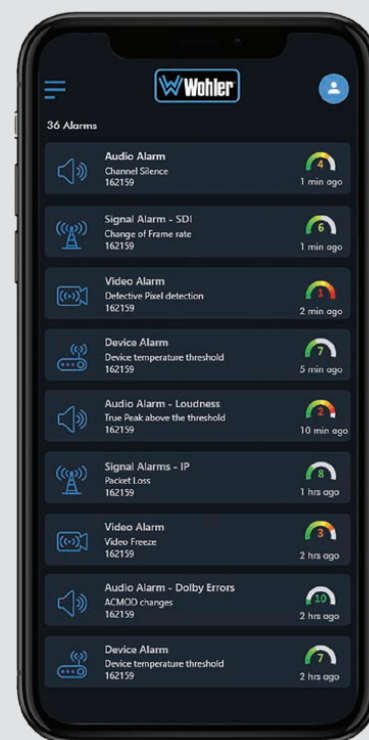

CONFIDENCE MONITORING AT ANY END DEVICE

Alerts

Configure Alerts to continuously monitor selected signals to detect errors occurring over a programmable duration, and to automatically trigger alerts.

Alerts can be transmitted as paging notifications to a predetermined group of operators on the accompanying Wohler mobile App.

User Management

Create individual users and user groups within MAVRIC. Create and assign probes and or probe groups to users and or user groups, to create a highly scalable system potentially spanning the globe with probes and users located anywhere in the world.

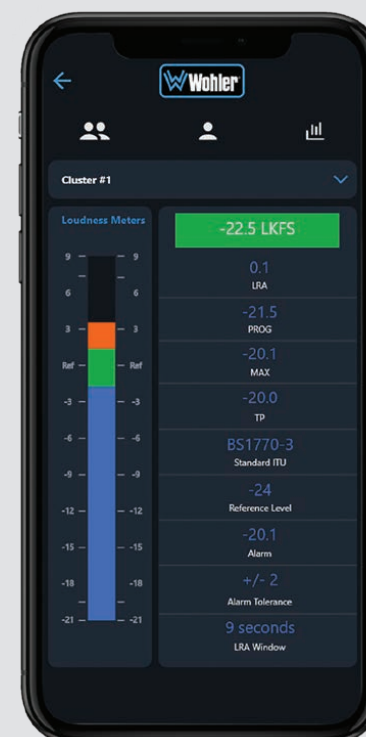

MAVRIC enables instantaneous communications across users and overlapping groups as needed, via the Conferencing application.

Multiview

Operators can create their own custom multiviewer, providing them with access to a predetermined set of signal probes. This enables operators to view signals from anywhere in the world, by assigning the desired selection of signal probes to them.

Multiviewer capabilities include the ability to view 16 audio meters, that can be listened to remotely (depending on probe type), one channel of video, along with audio loudness for any selected cluster and signal metadata for the signal being monitored.

Probe Configuration

Create and save configurations to continuously monitor 16 channels of audio, and (depending on probe type) one video signal for a host of errors.

Save these configurations as handy “presets”, that can then be applied to additional probes to save configuration time. Select out of a range of saved presets to quickly reconfigure a signal probe to monitor a different selection/configuration of signals connected to probes.

Optional format updates
Start small. Grow big.

WOHLER offers the **most comprehensive and complete** range of upgrade options for audio and video formats.

In addition, feature updates can be activated via software activation. This way cost-effective basic monitors can be retrofitted with essential formats at a later date.

UPDATES VIA SOFTWARE ACTIVATION KEY

Monitoring of Dolby® D, DD+ or E streams.

DOLBY ATMOS is available in the iAM-12G-SDI.

INTERNAL
OUTPUT
ROUTING

Most devices provide optional routing of input signals to various outputs.

AES3 I/O
HD-15

If the device provides HD-15 AES3 connectors, an update can unlock 8 AES3 I/O (4x Stereo).

MAVRIC
AUDIO PROBE

Most devices provide built-in audio-only remote monitoring probe. Requires a MAVRIC subscription.

MADI I/O
BNC

If the device provides BNC MADI connectors, the activation key enables 64x In with 64x looped Out channels.

GPI/O &
SDI REEMBED

If the device provides the GPIO option, a key enables 4/2 GP I/O. Some devices provide re-embedding of 16 selected audio channels over the integrated SDI OUT.

Enables monitoring from up to 64 channels of Dante or Ravenna input streams, including primary and secondary RJ-45 for hitless/2022-7 support. Available via Option Slot Card.

Available via SFP module as SingleMode or Multimode.

Single SDI BNC In. Enables also MAVRIC Video on a input of the device. Available via Option Slot Card.

8 Analog Inputs and 8 Analog Outputs via 2x DB-25 plus an optical SPDIF input. Available via Option Slot Card.

2022-6, 2110
WITH NMOS OR
EMBER+

Available via SFP module as Multimode optical connectors.

Unmatched Flexibility

Option Cards

& SFP Modules

for iSeries

OPTION CARDS

OPT-RMOC-12G

SKU: 829189

Provides 12G inputs to any 3G iSeries monitor.
Single BNC and 10 Gbps SFP slot for 12G/3G SDI or ST2110 input up to 3G. Enables MAVRIC functionality, capable of monitoring 8/16 channels of audio (iAM & iVAM Series) plus a single video input on the iVAM Series, selectable from a choice of sources connected directly to the card, or inputs connected to the in-rack monitor.

OPT-ANLG/TOS

SKU: 829170

Enables monitoring of 8 Analog channels on DB-25. Adds 8 Analog outputs. Provides an Optical TOSLINK input.

OPT-SFP

Adds two additional 3G inputs to 3G products, or two 12G inputs to 2x 12G via 10 Gbps 12G fiber SFP modules.
SKU: 829179

OPT-RAVENNA 64

OPT-RAVENNA 64 ANLG

Enables monitoring from up to 64 ch Ravenna input streams, including primary and secondary RJ-45 for hitless/2022-7 support (for Ravenna and 2110-30 signals). Adds a Gigabit SFP cage allowing multimode and single-mode network 1 Gbps SFP's for AoIP signals.
SKU: 829172 (with TOSLINK Input)
SKU: 829172-1 (with 2x unbal. Analog In)

OPT-DANTE 64

OPT-DANTE 64 ANLG

Enables monitoring from up to 64 ch Dante input streams, including primary and secondary RJ-45 for hitless/2022-7 support (for Dante and 2110-30 signals). Adds a Gigabit 1 Gbps SFP cage allowing multi-mode and single-mode network 1 Gbps SFP's for AoIP signals.
SKU: 829172 (with TOSLINK Input)
SKU: 829172-1 (with 2x unbal. Analog In)

2x SFP

SFP VIDEO

SFP MADI

SFP MODULES

10 Gbps SFP modules fit in any Wohler device with a SFP port and add additional Video and Audio formats to the basic feature set. SFP modules come with a software feature activation key. Use Emset to configure the SFP.

VIDEO FORMATS

SFP-2110 with NMOS or Ember+

SMPTE 2110 receiver with Multi-Mode 850 NM, LC (fiber) Connectors.
Ordering Note: User selectable between NMOS & Ember+. Unless specified, NMOS will be delivered as standard.
SKU: 829086-1

SFP-2110 w/Ember+ or NMOS or 2022-6

SMPTE 2110 or 2022-6 Receiver with Multi-Mode 850 NM, LC (fiber) Connectors. NMOS ships standard
SKU: 829087-1

MADI (AUDIO)

SFP-MM-MADI-FIBER

MADI optical fiber transceiver, Multimode; LC Connectors
SKU: 829081

SFP-SDI

3G/HD/SD-SDI single receiver w/ active loopback, HD-BNC Connectors
SKU: 829089

SFP-SDI-Fiber

12G/3G/HD/SD-SDI or ASI single receiver w/ active loopback, HD-BNC Connectors
SKU: 829084

SFP-2022-6

SMPTE 2022-6 Receiver; Multi-Mode 850 NM, LC (fiber) Connectors
SKU: 829088

- STEREO
- DUAL SPEAKERS
- HEADPHONES
- 2x TOUCH SCREEN

IP-ready, state of the art MPEG & 12G video and audio monitor with touch screen controls, and APIs for remote management.

The powerful 16 monitoring channel unit accepts MPEG over RJ45 TSolP. Separately, it includes 2 x 12G/3G/HD/SD-SDI signals over BNC as standard. 4 SFP cages allow for a variety of additional monitoring options, including 2110, 2022-6, as well as additional SDI inputs in a variety of combinations listed in the table below.

As an upgrade option, Dolby® D, Dolby® D+, and Dolby® E are optional available.

The built-in, touch-capable display is designed for easy operation with fast access to audio meters, menus and presets. It includes loudness measurement, phase status and HDR detection. The device contains an onboard web server. This way multiple Wohler units on the same network can be monitored (audio meters viewed remotely), controlled and updated via a web-based user interface.

MPEG The device can decode MPEG SRT MPEG2, H.264 or H.265 HEVC transport streams, at bitrates up to 35Mbps. The unit parses out the transport stream and presents operators with PID tables, allowing for independent selection of audio and video PID's for decoding via a simple intuitive touch screen interface. Closed Captions overlayed on the video display, allow for monitoring of CC and subtitles embedded in the MPEG transport stream. Audio monitoring for AAC, Dolby Digital+ or MP3 is supported. Built-in SCTE tag detection.

IP-ready, 16 channel video and audio monitor with MAVRIC support. The 2RU device provides two large screens and powerful speakers. Includes loudness measurement, phase status and HDR detection.

The standard setup provides 3G-SDI and a dual analog I/O. Other formats and I/O options are available as license or via the hardware option slot.

The built-in, touch-capable display is designed for easy operation with fast access to audio meters, menus and presets. The device contains an onboard web server. This way multiple Wohler units on the same network can be monitored, controlled and updated via a web-based user interface.

8 AUDIO METERS NET REMOTE

IP-ready 8 channel video and audio monitor with large touch screen and MAVRIC support.

The device includes loudness measurement, phase status and HDR detection. It provides a HDMI output for the video source and optional 2022-7 support.

The device provides two 3G-SDI inputs and a dual analog I/O. Other formats and I/O options are available as license or via the hardware option slot.

Unique in this device class: the built-in, touch-capable display is designed for easy operation and provides fast access to audio meters, menus and presets. Fast selection and summing of up to 8 audio channels with video, allowing quick muting and hold-for-solo. Video display includes resolution indication and HDR detection. Virtual rotary dials showing trim levels with master volume control and master mute/unmute. Channel names can be displayed for each input or pulled from a router.

The device contains an onboard web server. This way multiple Wohler units on the same network can be monitored, controlled and updated via a web-based user interface.

AUDIO METERS
VIA WEB GUI

 NET REMOTE

12G-SDI Remote Monitor in openGear form factor with options for SDI Fiber, MADI, ST2110, ST2022-6, Dante and Ravenna.

The card is perfect for situations where a local operator is not available to operate the monitor front panel.

Access to the I/O with Audio, Video, Meters and Loudness is possible via a web interface using standard web browser. It's also compatible with MAVRIC for multi-user remote monitoring and automated alerts.

One channel of HD Video and 8 channels of Audio selected from the available inputs, are encoded (H.264) at a selectable bitrate, and streamed as WebRTC via the network interface for remote monitoring.

IP-ready 8 mone channels or eight stereo pairs (16) professional audio monitor with MAVRIC support.

The built-in, large touch-capable display is designed for easy operation and provides fast access to audio meters, menus and presets. The design emphasizes individual mechanical controls for sum, mute and solo operations. The iAM-MIX8-G can be configured to operate in either single channel (8 channel) or pair mode (16 channel). The screen support Evertz, Grass Valley & Tallyman protocols for automated display of channel labels.

The device includes phase status.

The standard setup provides 3G-SDI and a dual analog I/O. Other formats and I/O options are available as license or via the hardware option slot (see right).

All iAM Series monitors contain an onboard web server. This way multiple Wohler units on the same network can be monitored, controlled and updated via a web-based user interface.

IP-ready 8 channel professional audio monitor with MAVRIC support.

The built-in, large touch-capable display is designed for easy operation and provides fast access to audio meters, menus and presets.

The screen provides individual controls for the fast selection and summing of up to 8 sum, allowing quick muting and hold-for-solo. Virtual rotary dials showing trim levels. The master volume control works as a master mute/unmute. Channel names can be displayed for each input or pulled from a router with Evertz, Grass Valley & Tallyman protocols for automated display of channel labels.

The device includes loudness measurement and phase status.

The standard setup provides two 3G-SDI inputs, a 3G SDI output and a dual analog I/O. Other formats and I/O options are available as license or via the hardware option slot (see right). The optional MADI input on BNC is looped out.

All iAM Series monitors contain an onboard web server. This way multiple Wohler units on the same network can be monitored, controlled and updated via a web-based user interface.

STEREO DUAL SPEAKERS HEADPHONES 1x LARGE TOUCH SCREEN

16/32 AUDIO METERS NET REMOTE

IP-ready 16/32 channel professional audio monitor with MAVRIC support.

The built-in, large touch-capable display is designed for easy operation and provides fast access to audio meters, menus and presets. The screen provides individual controls for the fast selection and summing of up to 16/32 sum, allowing quick muting and hold-for-solo. Virtual rotary dials showing trim levels. The master volume control works as a master mute/unmute. Channel names can be displayed for each input or pulled from a router with Evertz, Grass Valley & Tallyman protocols for automated display of channel labels.

The device includes loudness measurement and phase status. The standard setup provides two 3G-SDI inputs, a 3G SDI output and a dual analog I/O. Other formats and I/O options are available as license or via the hardware option slot (see right). The optional MADI input on BNC is looped out.

All iAM Series monitors contain an onboard web server. This way multiple Wohler units on the same network can be monitored, controlled and updated via a web-based user interface.

NET REMOTE

Budget-friendly IP-ready 16 channel video and audio monitor with a single screen, which toggles between video and level meters.

eVAM1-1 and eVAM1-1+ are well featured, easy to use, competitively priced baseband only devices.

Both identical versions come with 3G-SDI (2 inputs), AES3 (1 pair) & Analog Inputs & Outputs (2 selectable pairs on XLR or RCA). Additionally, the 1-1+ version comes already with the HDMI I/O card equipped.

With touch screen operation included as well as 8 presets, the eVAM1-1 and eVAM1-1+ are the perfect solution for any application that requires a compact product for monitoring of baseband signals.

Audio meters are displayed on the touch screen LCD display in up to 8 channel pairs (left). A choice of seven Peakmeter scales is available (top).

HEADPHONES

Ultra-compact, 2 channel audio monitor that fits perfectly in a network facility or OB truck for live events. Monitor through built-in speakers, headphones and analog outputs.

The unit provides Wohler build quality, a shallow depth of five inches, and great pricing. Fast selection and monitoring of any available pair of audio is available via either 1 x 3G-SDI (with looped output), 1 x AES3 input pair, and either of 2 pairs of Analog inputs (Balanced or Unbalanced).

An additional 8 pairs of both Analog and AES3 on 3 x DB-25 inputs are included on the AMP1-2SDA+ model. Analog and AES3 outputs of the selected pair are included in the unit for external monitoring.

Designed with simplicity in mind, the AMP1-2SDA provides two rotary controls that allow the user to easily select a source with the first and then move through that source's corresponding audio pairs with the second. A large front panel screen, highly visible to users, displays the selected source and monitored pair, along with brightly displayed levels on 2 x 26 segment LED meters. Additional features include simple tone controls for adjusting audio output and an audio trim control for altering the analog output levels.

The eAMP1-S8-DA offers fast and intuitive confidence monitoring of AES3 and analog audio sources. Whether in the studio or on the road, this unit provides simultaneous selection and summing of the selected source. It features adjustable volume and balance controls, clear display of levels, and phase indications.

The e AMP1-S8-DA is designed for easy operation and includes a wide 7" LCD touchscreen display providing fast access to input sources, meters and menus, all augmented by hardware controls.

The basic monitoring package includes AES3 and Analog inputs (no IP options), a software upgrade package that includes loudness, presets, web meters/monitoring/configuration and customized output routing is available to bring its functionality in line with the more recent iSeries offerings in our price list. Dolby D, DD+ and E decoding are also optional add-ons.

AMP1A-PLUS

SKU: 8100-0320

- 2 CHANNELS
- 4x ANALOG IN
SOURCE 1
SOURCE 2
- 2x ANALOG OUT

The AMP1A monitors provide self-powered, full fidelity stereo audio monitoring of 2 analog channels (1 stereo channel) in the smallest rack space possible. The unit provides four high performance transducers, driven by three power amplifiers: one amplifier/driver combination handles midrange and high frequency information in stereo, while the second handles summed low frequency information below the 500 Hz crossover point.

The unique design provides optimally focused sound for operators in an ultra near field (1 to 3 ft.) working environment and offers performance comparable to that of many separate monitor pairs, yet does so without the installation hassles, awkward speaker placements and “added-on” look. This provides for a higher SPL for the operator while reducing overall ambient sound and adjacent bay crosstalk.

Extended HF response reveals potential problems with audio whine or hiss. Electronic rather than acoustic cancellation of bass frequencies provides positive audible detection of out-of-phase (reversed polarity) audio feeds. A headphone jack is provided on the front panel; usage automatically mutes the speakers.

- 10^W RMS, 20^W Transient
SPEAKER POWER OUTPUT
- 98dB SPL @ 2 feet
PEAK ACOUSTIC OUTPUT
- 10 lbs / 8 lbs
WEIGHT/NET WEIGHT

FEATURES

- Full fidelity audio monitoring in only 1RU
- Premium quality drivers and power amplifiers
- Two balanced analog Inputs with loop-through (1 stereo)

BENEFITS

- Thorough magnetic shielding allows placement next to video monitors.
- Extended Frequency Response and Low Distortion provide excellent reproduction.
- Audible indication of phase/polarity provides instant information.

VMQ-4

SKU: 8110-0030

AUDIO
BASEBAND

- 4 CHANNELS
- 4x ANALOG IN
MINI PHOENIX

The VMQ-4 audio monitor provides voice quality confidence monitoring of up to 4 analog channels simultaneously. The VMQ-4 only requires a compact 1U of rackspace and is available at a very cost effective price. Each channel has its own dedicated power amplifier and speaker, the audio sources remain completely separate from input to output. When listening within ultra near field distances of 1 to 3 feet, these discrete speaker outputs provide enhanced source distinction when compared to designs with four inputs mixed into a single output. Each channel has an LED which illuminates when a signal is present at the input allowing the operator to easily determine at a glance which channels are currently active, very helpful when quick volume adjustments are required. Separate mute buttons are provided for each channel; these together with an LED that indicates channel muting allow an operator to quickly mute one or more channels. A stereo headphone jack has Channels 1 and 2 summed on the left side, and Channels 3 and 4 on the right side. The VMQ-4 is completely magnetically shielded to allow interference-free operation immediately adjacent to all CRT video monitors. The lighter weight lower-depth chassis compared to similar-type units, make it ideal for use in portable and mobile vehicle applications.

- 10^W RMS, 20^W Transient
SPEAKER POWER OUTPUT
- 94dB SPL @ 2 feet
PEAK ACOUSTIC OUTPUT
- 10 lbs / 8 lbs
WEIGHT/NET WEIGHT

FEATURES

- Mute button and LED for each channel
- Space saving 1RU
- Dedicated Input for each output channel
- Powerful 94dB SPL at 2 feet (0.6m)
- 4 balanced analog inputs
- Signal present LED on each channel input
- Headphone jack mutes speakers
- Blowout-proof speakers

BENEFITS

- Monitoring of 4 discrete audio channels in 1 unit
- Thorough magnetic shielding for placement next to video monitors
- Lightweight and shallow-depth chassis
- Quick and simple installation
